## **CLAIMS**

## What is Claimed is:

1	1.	A process for further purifying a preprocessed zinc oxide containing
2	residue com	prising thermally processing the material at a temperature between
3	400 and 700	°C for a period of time.

- 2. The process as claimed in Claim 1, wherein the temperature is greater than 600°C.
- 3. The process as claimed in Claim 2, wherein the temperature is between 600°C and 700°C.
- 1 4. The process as claimed in Claim 1, wherein the time period is 2 greater than 5 minutes.
- The process as claimed in Claim 4, wherein the time period is greater than 1 hour.
- 1 6. The process as claimed in Claim 5, wherein the time period is 2 greater than 2 hours.
  - 7. The process as claimed in Claim 1, whereby the product comprises zinc oxide and has a surface area between 4 and 6 square-meters per gram.
- 1 8. The process as claimed in Claim 1, wherein the process is the final 2 step after a prior purification process.
- 1 9. The process as claimed in Claim 1, whereby the process improves 2 the purity of the zinc containing material from under 60 percent to over 60 percent 3 by mass.
  - 10. The process as claimed in Claim 1, wherein the process improves the purity of zinc oxide from under 98 percent to over 98 percent by mass.
- 1 11. The process as claimed in Claim 1, wherein the process improves 2 the purity of zinc oxide to greater than 98 percent by mass.
- 1 12. The process as claimed in Claim 1, resulting in a zinc oxide product 2 has a surface area of between 3 m²/g and 7 m²/g.
- 1 13. The process as claimed in Claim 12, wherein the zinc oxide product 2 has a surface area of between 4 m²/g and 6 m²/g.

- 1 14. The process as claimed in Claim 10, resulting in a zinc oxide product 2 has less than 0.8% chlorides by mass.
- 1 15. The process as claimed in Claim 14, wherein the zinc oxide product 2 has less than 0.4% chlorides by mass.
  - 16. A method of recovering zinc oxide from a metal waste containing zinc oxide state and impurities comprising:
  - a. a preliminary process comprising mixing the waste and a reducing material to create a preprocessed zinc oxide containing material; and
- b. a purification process of thermally processing the preprocessed zinc
  oxide containing material for a defined period of time.
  - 17. The method according to Claim 16, wherein the preprocessed material is thermally processed at a temperature greater than 400°C.
- 1 18. The method according to Claim 17, wherein the preprocessed 2 material is thermally processed at greater than 600°C.
- 1 19. The method as claimed in Claim 18, wherein the preprocessed 2 material is thermally treated at a temperature of between 600° and 700°C.
- 1 20. The method as claimed in Claim 16, wherein the defined period of 2 time is greater than 5 minutes
- 1 21. The method as claimed in Claim 20, wherein the defined period of 2 time is greater than 1 hour.
  - 22. The method as claimed in Claim 21, wherein the defined period of time is greater than 2 hours.
  - 23. The method as claimed in Claim 16, wherein the process improves the purity of zinc oxide in the material.
- 1 24. The process as claimed in Claim 16, resulting in a zinc oxide product 2 has a surface area of between 3 m²/g and 7 m²/g.
- 1 25. The process as claimed in Claim 24, wherein the zinc oxide product 2 has a surface area of between 4 m²/g and 6 m²/g.
- 1 26. The process as claimed in Claim 23, resulting in a zinc oxide product 2 has less than 0.8% chlorides by mass.
- 1 27. The process as claimed in Claim 26, wherein the zinc oxide product 2 has less than 0.4% chlorides by mass.

between 620°C and 700°C.

2

1	28.	A method for recovering zinc oxide from a metal waste containing	
2	zinc oxide and impurities comprising:		
3	processing the waste with a reducing material to create a preprocessed		
4	zinc oxide containing material;		
5	heating the zinc oxide containing material at a temperature above 400°C		
6	for a period of time greater than 5 minutes,		
7	whereby the heating of the zinc oxide containing material increases the		
8	purity of the zinc oxide without substantially degrading the surface area of the		
9	material.		
1	29.	The method as claimed in Claim 28, wherein the temperature is	
2	above 600°C.		
1	30.	The method as claimed in Claim 29, wherein the temperature is	
2	between 600°C and 700°C.		
1	31.	The method as claimed in Claim 30, wherein the temperature is	
2	683°C.		
1	32.	The process as claimed in Claim 28, resulting in a zinc oxide product	
2	has a surface area of between 3 m <sup>2</sup> /g and 7 m <sup>2</sup> /g and has less than 0.8%		
3	chlorides by mass.		
1	33.	The process as claimed in Claim 32, wherein the zinc oxide product	
2	has a surface area of between 4 m <sup>2</sup> /g and 6 m <sup>2</sup> /g and has less than 0.4%		
3	chlorides by mass.		
1	34.	A method for recovering zinc oxide from a metal waste containing	
2	zinc oxide and impurities comprising:		
3	processing the waste with a reducing material to create a preprocessed		
4	zinc oxide containing material;		
5	heating the zinc oxide containing material at a temperature between 600°C		
6	and 700°C for a period of time between 5 minutes and 2 hours,		
7	whereby the heating of the zinc oxide containing material increases the		
8	purity of the zinc oxide without substantially degrading the surface area of the		
9	material.		
1	35.	The method as claimed in Claim 34, wherein the temperature is	

- 1 36. The method as claimed in Claim 35, wherein the time is between 20 minutes and 2 hours.
- 1 37. The process as claimed in Claim 36, resulting in a zinc oxide product 2 has a surface area of between 3 m²/g and 7 m²/g and has less than 0.8%
- 3 chlorides by mass.
- 1 38. The process as claimed in Claim 37, wherein the zinc oxide product
- 2 has a surface area of between 4 m<sup>2</sup>/g and 6 m<sup>2</sup>/g and has less than 0.4%
- 3 chlorides by mass.
